EC2 > Instances > Launch an instance

Launch an instance

Amazon EC2 allows you to create virtual machines, or instances, by following the simple steps below.

Name and tags

Name

My Web Server

Application and OS Images (Amazon AMIs)

An AMI is a template that contains the software configuration (operating system, applications, and data) required to launch your instances. See the [Amazon AMI documentation](#) for more information.

Search our full catalog including 1000s of applications

Create key pair

We noticed that you didn't select a key pair. If you want to be able to connect to your instance it is recommended that you create one.

Create new key pair

Proceed without key pair

Key pair name

Key pairs allow you to connect to your instance securely.

Linux1

The name can include up to 255 ASCII characters. It can't include leading or trailing spaces.

Key pair type

RSA

RSA encrypted private and public key pair

ED25519

ED25519 encrypted private and public key pair

Private key file format
